BLADECORE™

**MADE TO
WORK**

BLADECORE™

WITH OVER THREE DECADES IN THE SCRAP AND DEMOLITION BUSINESS, WE KNOW BLADES.

BladeCore offers the highest quality replacement blades on the market today. Through our experience working with the designing and manufacturing of mobile shears, we've discovered great success with a specialized material called Chrome Boron that provides a 20-30% increase in production over a standard blade.

On select models, we also work with a different type of material composed of 4% Nickel, which we refer to as the NiCore™ premium blade series. The nickel content in this material makes the blade extremely tough. These blades are yielding an average of 60-80% longer per edge than a standard blade. This blade performs particularly well in the hardest of conditions like cable, rebar, and stainless.

NiCore™ blades will redefine blade life expectations in the scrap metal and demo industries.

PEANUT BUTTER AND JELLY

When it comes to blades, we know what's the best because we've tried them. We've put in the time and spent the money to know what metallurgies are the most effective, which heat treatment processes are the best, and why. We've spent decades building relationships with some of the best blade manufacturers in the world.

Do we sell quality stuff? For sure we do. Ask us, and we'll tell you it's the best out there. The difference with BladeCore is we've listened to our customers, and they tell us they are looking for more than just a quality product. They're looking to make one phone call to a person they trust and know that they're going to be taken care of. That's our pledge to our customers.

Quality without premium service and relationships is like peanut butter without jelly. We're out to make the BladeCore experience the best damn PB & J our customers have ever had.

BLADES, BOLTS, AND SHIMS

We are all about blades, and only blades. This allows us to put our own spin on structural improvements and design modifications in order to increase blade life and provide for a more user-friendly installation. We provide blade kits, as well as bolt and shim kits, for a variety of mobile shears including Genesis®, Labounty®, and Fortress®.

We have many customers who have asked us to produce blades for their stationary shears like Sierra®, Copex®, Harris®, Metso®, and Bonfiglioli®.

Our answer is **YES**.

We'll work with you to manufacture blades for your shear with the blade material best for your specific application.
